No.of Participants: 121

The main objective of the programme was to learn basic concepts of designing and printing of 3D models. Students will acquire knowledge including the parts and the way that 3d printers function the materials used in 3d printing. There was a huge enthusiasm among the teachers and the students for the programme.

Topics covered:

- Design Sketching for 3D Printing
- Tinkercad
- Fusion 360 Basics
- Fusion 360 Advanced
- 3D Scanning

LabView is a graphical programming language that may be combined with NI modules to create real-world systems in addition to simulation. Engineers in the fields of electronics and communications can benefit greatly from LabView software. In LabView, there are numerous ECE-related modules. LabView FPGA module, LabView Real-Time Module, LabView Embedded Module for ARM Controllers, LabView Wireless Sensor Modules, LabView C Generator Modules, Digital Filter Design Toolkit, etc. are a few of them. ECE undergraduate and graduate students may use this programme for their projects. Additionally, due to its simplicity in development, this software will be very helpful for research. The goal of this session is to prepare participants for the first-level CLAD LabView examination. The training will be entirely practical.

Topics Covered:

- Introduction to LabView, Starting to use LabView Creation of Sub VI and Trouble shooting and debugging.
- Loops, Case Structure, Sequence structure and Event structure.
- Working with Data-Array, string and cluster.
- Design Techniques–Forcing program flow, Shift register, State programming architecture, multiple loops and parallel programming and templates.

There is an urgent need to bridge the gap between theory and practice in engineering education in India. The impact of nanostructured materials in current and upcoming commercial products and technology will be examined. Biomedical applications will receive particular attention. It will be possible to gain a better knowledge of important design elements at the nano-scale by learning about the primary physical forces governing the nucleation and deposition of nanostructures. A comprehensive review of the most cutting-edge nanomanufacturing techniques will be provided through the critical discussion of both well-established and innovative synthesis/fabrication methods for nanostructures.

Topics Covered:

- Addressing the gaps in the engineering curriculum
- General Concepts in Nanotechnology
- Nanotechnology and the Nanosciences
- Characterization of major top-down and bottom-up strategies
- Physical laws active in the nano-range
- Basics of the electronic structure of atoms, molecules, and nano-particles
- Major chemical materials used in NT

The deployment of electric vehicle technology continues to progressively expand around the world. The future of work is shifting across automotive and manufacturing segments to support electric cars and renewable energy initiatives. Electric vehicles are creating technological disruption. Electric vehicles are the future of the automotive industry. The electric vehicle technology industry presents opportunistic career paths for STEM related occupations.

Topics Covered:

- ❖ Introduction to Electric Vehicle
- ❖ Vehicle Dynamics: Modelling and Simulation
- ❖ Fundamental of Drives and DC Machine Modeling
- ❖ DC Machine Drives and Control of EV Using DC Machine

The objective of this program is to educate the students about Cloud Computing concepts, Amazon Web Services and Amazon Simple Storage Services and to make the students able to utilize the Cloud Computing concepts.

The topics covered in this program are

- Cloud Concepts Overview
- Cloud Economics and Billing
- AWS Cloud Security
- Storage
- Databases
- Cloud Architecture
